

## AMENDMENTS TO THE CLAIMS

1        1. (Original) A blister pack comprising a front part having a recessed portion for  
2 receiving and containing an article to be packaged, a back part having a relieved portion adapted  
3 for insertion into the recessed portion of the front part for closure of the pack, and co-operating  
4 locating means on the front and back parts respectively to maintain the pack in a closed condition;  
5 characterised in that the locating means comprises an abutment on the inner wall surface of the  
6 recessed portion of the front part, and a co-operating abutment on the outer wall surface of the  
7 relieved portion of the back part, the inner and outer wall abutments being located thereon such  
8 that they become inter-engaged to close the pack only when the back part is contained wholly  
9 within the recessed portion of the front part.

1        2. (Original) A blister pack according to Claim 1, wherein the front part has a flange  
2 extending around the rim of the recessed portion.

1        3. (Original) A blister pack according to Claim 2, wherein the flange includes an aperture  
2 for suspension of the blister pack upon a display hook.

1        4. (Currently Amended) A blister pack according to Claim 2 [or Claim 3], wherein the  
2 flange includes a peripheral formation to provide the appearance of a weld.

1        5. (Currently Amended) A blister pack according to [any preceding claim] Claim 1,  
2 wherein the abutment of the front part comprises a continuous ridge protruding inwardly from the  
3 wall surface of the recessed portion.

1        6. (Currently Amended) A blister pack according to [any preceding claim] Claim 1,

2 wherein the abutment of the back part comprises a continuous narrow flange protruding outwardly  
3 from the relieved portion.

1        7. (Currently Amended) A blister pack according to [any preceding claim] Claim 1,  
2 wherein the front and back parts of the pack are connected together by an integral hinged portion,  
3 the entire pack being formed by deformation of a single sheet of translucent plastics material.

1        8. (Currently Amended) A blister pack according to [any preceding claim] Claim 1, wherein  
2 the front part, on its inner or outer surface, has a surface texture to render the front part  
3 translucent with reduced transparency.

1        9. (Original) A blister pack according to Claim 1, wherein the front part has a stepped  
2 recess forming a plinth with an outer flange extending peripherally around the plinth.

1        10. (Currently Amended) A blister pack according to [any preceding claim] Claim 1,  
2 wherein the respective abutments of the front and back parts become inter-engaged with a snap  
3 action when the pack is closed.

1        11. (Currently Amended) A blister pack according to [Claims 5 and 6] Claim 5, wherein  
2 the abutment on the inner wall surface of the recessed portion of the front part extends from said  
3 wall surface to a greater extent than that by which the abutment of the relieved portion of the back  
4 part extends from the outer wall surface thereof.
